

Parents know to read to their kids at night - but what about math?

Bedtime Math helps kids
learn to love math as much
as bedtime or dessert.

We post zany daily math riddles
for parents and kids aged 3-9.
We also offer libraries and after-
school programs Crazy 8s,
a hands-on math club that get
kids playing with numbers.
It's nothing like school.

Kids get hooked fast—we hear
that kids are now asking their
parents for nightly math.
It's catching, it's fun, and it's free.

We never hear adults say
“I’m just not good at reading.”
But people say “I’m just not good
at math” all the time. When
kids hear that, they shy away
from math at school.
It's time to break that cycle!

Math will never be the same.

Join the Movement

Bedtime Math is a nonprofit whose
mission is to help kids love
numbers so they can handle
the math in real life.

Math gone wild!

Join our brand new after-school club
designed to get kids fired up about math.

Mobile math!

Download our free app
for smartphone and tablet.

A real page turner!

Bedtime Math®

...where math meets mischief.

www.bedtimemath.org

Did you know that...

Math skills at kindergarten entry are a better predictor of school success than reading skills or attention span.

Nearly half of all 8th graders can't line fractions up from smallest to largest.

More US college students choose to major in "leisure studies" than in all physical sciences combined.

Our kids need to read to succeed—but they also need to do the math

Bedtime Story. Bedtime Math

Every night we send out a fun new math problem—by email, on our website, and on our free app. You can even read one from our best-selling books.

Read the story and math problem aloud to your kids, then let them wrestle with it and solve it in their heads. If they get stuck, walk them through it step by step. They love it when they get the answer.

If you like, print out our monthly calendar. Your kids can use stickers to track their Bedtime Math riddles and giggles.

Most of all, have fun! Join the movement today at www.bedtimemath.org.

One of Our Favorites

Mammals on the Run

Sure, you can ride your bike or drive a car to get places. But wouldn't it be more interesting to ride your favorite animal? Of course, you sure wouldn't pick a turtle or a snail as your ride. A bear can run 30 miles per hour. An antelope can run 55 miles per hour. But the fastest, the cheetah, can sprint at up to 60 miles per hour. The question is, which one is willing to take you to the park?

WEE
ONES

If you have a pet cheetah, bear and antelope, how many pets do you have?

LITTLE
KIDS

How many legs do they have altogether?

BIG
KIDS

If you can bike at 20 miles per hour but your pet cheetah can take you at 60 miles per hour, how much faster is your spotted pet?

Answers: 3 speedy pets; 12 legs; 40 mph.
